📜 How to play

Escape **The Locked Library**. One action per message, for example:

- *examine the desk · read the note*
- *look behind the painting · take the key*
- *use the key on the drawer · enter 1234*
- *inventory · hint · help*

🔐 AI Escape Room

Version 2: Python enforces the rules, the AI tells the story

🤷 You wake up on a cold wooden floor. Dust hangs in the pale light of a single reading lamp. You are in an **old library**, and the heavy oak door behind you is locked. A small brass keypad glows beside it, waiting for a **four-digit code**.

Looking around, you see a **writing desk** with a **locked drawer**, a tall **bookshelf**, a **painting** of a clock tower hanging slightly crooked on the wall, and the **reading lamp** humming softly in the corner.

What do you do?

👱 examin the desk

🤷 You step up to an old wooden writing desk, smelling faintly of dried pine and aged varnish. A folded note lies on top, and a small drawer with a keyhole is built into the front.

```

👱 i check the story text

Version 2 · Model: `gemini-3.5-flash-lite` · LLM calls: 3

You squint against the dim, amber glow of the reading lamp, searching in vain for anything to read. The air tastes faintly of aged paper and dust, but there is no story text that you can see here.

Behind the scenes
